

What the System Remembers: The Trial Run

系统记住了什么：第一次试行

English Story

The trial run entered its **next** phase on a Tuesday, with a **package** of four forms and a program on a computer that only one person could operate. “The **importance** of a **clause** is not theoretical,” Aisha said. “It is the difference between a **percentage** and a person.” **Currently** the club could not say what **percent** of its data was actually needed.

The **pattern** was easy to **attach** to the wrong thing. A **bold heading**, a **horizontal** line, and a **segment** of the **catalog** were underlined for emphasis; the **uncertainty** was in the **oven** of the whole operation, where a **shortage** of **clarity** could bake a bad decision. “**Omit the flavor**,” Maya wrote. “**Maximize the precision**.”

The **diversity** of the volunteers was the only **inclusion** that mattered. A **bulky fixture** on the wall, a **stationary** bicycle in the corner, and a wrapped **package** of aluminium foil: the lab had a **density** of objects and a **shortage** of space, and the **wrapping** alone took an hour to remove.

The **theoretical** part of the trial was a **liberation** from the old assumption that more data means more safety.

“**Astronomy** can measure a **millimetre** of movement at the other end of the sky,” the engineer said. “We cannot measure a decision in our own office.” The **stoppage** of the launch was, in that sense, a form of **mechanization** in reverse.

The **dynamics** of the **next** month were simple: one action a week, one review of the system, and one honest talk about what was off and what was on. “Look at the movement of the data, not the bank balance,” she said. “We are not able to **earn** consent; we can only four times a year show that we did not lose it.” The side of the argument that carried the day was the smallest one: **furnish** the reader with **clarity**, and the technology will follow. The **height** of the shelf, the **aluminum** foil, and the **revision** of the **catalog** had to be assembled into one document before the audit. “You cannot **integrate** a body of evidence by holding it in your hand,” the engineer said. A **revision** a week, a body of notes, and a hold on the launch: that was the whole plan.

试行在周二进入下一阶段，带着一包四份表格，以及一个只有一个人会操作的程序。“条款的重要性不是理论上的，”艾莎说，“它是百分比与一个人之间的差别。”目前俱乐部说不清自己的数据里究竟有百分之多少是真的需要的。

模式很容易被附到错误的东西上。一个加粗的标题、一条水平线，以及目录中的一个片段被加了下划线以示强调；不确定在于整个运作的炉灶里——清晰度的短缺可能烤出一个糟糕的决定。“把味道省掉，”曼雅写道，“把精确度最大化。”

志愿者的多样性是唯一要紧的包容性。墙上一件庞大的固定装置、角落里一辆静止的自行车，以及一包用铝箔包好的包裹：实验室有物体的密度，却缺少空间，而光拆包装就花了一个小时。

试行中理论性的部分，是从“数据越多越安全”这个旧假设中获得解放。“天文学能测出天空那一端一毫米的移动，”工程师说，“我们却测不出自己办公室里的一个决定。”从这个意义上说，发布的停止是一种反向的机械化。

下个月的动态很简单：每周一个行动、一次系统复盘，以及一次关于什么关着、什么开着的诚实谈话。“看数据的运动，不要看银行余额，”她说，“我们没有能力赢得同意；我们只能一年四次说明我们没有把它弄丢。”当天占了上风的，是最小的那一面：给读者提供清晰，技术会跟上。架子的高度、铝箔，以及目录的修订，必须在审计之前汇集到一份文件里。“你无法靠把它拿在手里来整合一堆证据，”工程师说。每周一次修订、一堆笔记，以及对发布的暂缓：这就是整个计划。
